SUMMARY

AI/Backend Developer and Co-Founder of Devnexes Digital Solutions, a 2-person engineering studio that has delivered 6+ production applications for real clients. Focused on agentic AI systems, computer vision, and full-stack automation — building LLM-integrated, production-grade tools with Python, FastAPI, and React, from AI code-review pipelines to real-time video processing systems.

EXPERIENCE

Co-Founder & Lead Developer | Devnexes Digital Solutions

2024 – Present

- Co-founded a 2-person software studio; lead full-cycle delivery of 6+ client applications from requirements gathering through architecture, development, and deployment.
- Built reusable backend infrastructure (FastAPI, Celery, Redis) adopted across multiple client engagements, cutting new-project setup time by an estimated 40%.
- Lead architecture decisions and code review across the ERP and video-processing product lines, setting the technical standards the team builds against.

AI/ML Intern | DecodeLabs

3-month internship, 2024

- Built a cosine-similarity recommendation engine in React as part of a 3-month AI/ML internship.

PROJECTS

AI Code Review Platform | Independent

Sep 2025 – Present

- Combined Semgrep/Bandit static analysis with an LLM (Groq/Llama 3) context-aware pass to flag vulnerabilities, missing error handling, and hardcoded secrets in public GitHub repos, reducing manual review time on flagged files.
- Shipped a PR mode that posts structured review summaries directly to GitHub pull requests, removing a manual copy-paste review step from the workflow.

ClipForge — AI Video-Clipping Pipeline | Independent

May 2025 – Aug 2025

- Built an end-to-end pipeline (FastAPI, Celery, Cloudflare R2) that ingests long-form video and automatically generates and uploads short-form highlight clips, replacing a manual editing workflow with a fully automated one.

DevArchitect AI — Coding Assistant | Independent

Jan 2025 – Apr 2025

- Developed an SSE-streaming coding assistant integrated with the Claude API, supporting real-time multi-turn chat with server-side key management for concurrent sessions.

Real-Time Drowsiness Detection System | Independent

Oct 2024 – Dec 2024

- Built an OpenCV-based facial landmark tracking system that processes live video input in real time to monitor driver alertness.

ANPR — Automatic Number Plate Recognition | Independent

Jul 2024 – Sep 2024

- Combined YOLOv8 detection with OCR post-processing to extract plate text from video frames.

SKILLS

Languages: Python, TypeScript, JavaScript

Backend: FastAPI, Flask, Node.js, Celery, Redis

AI/ML: Computer Vision (OpenCV, YOLOv8), LLM Integration (Claude API, Groq/LLaMA), Agentic AI (smolagents, ReAct)

Frontend: React, Next.js, Tailwind CSS

Infrastructure & Tools: Git/GitHub, Docker, Cloudflare R2, Supabase, Semgrep, Bandit, FFmpeg

Automation: Selenium, PyAutoGUI, SpeechRecognition

EDUCATION

BS Computer Science (BSCS) | Tuf University

In Progress

Intermediate in Computer Science (ICS) | Punjab College

2024 – 2026

CERTIFICATIONS

- Supervised Machine Learning: Regression and Classification — DeepLearning.AI, Aug 2026
- AI Agents Course — Hugging Face

LANGUAGES

English (Professional), Urdu (Native)
